

NAW defrosting nozzle

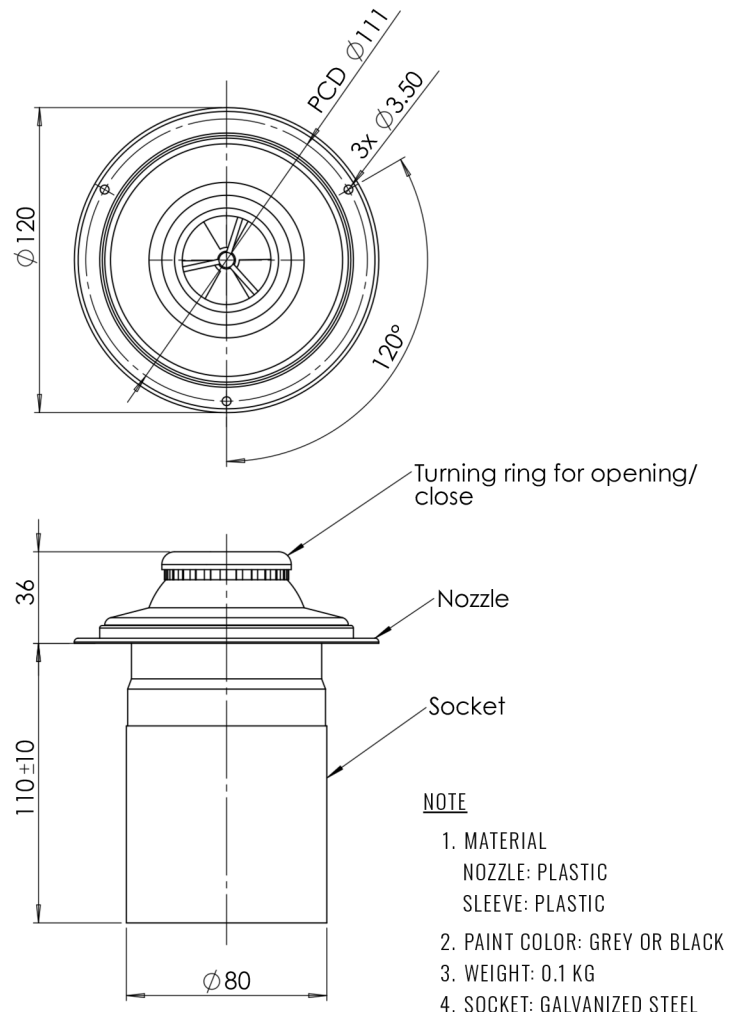

DESCRIPTION

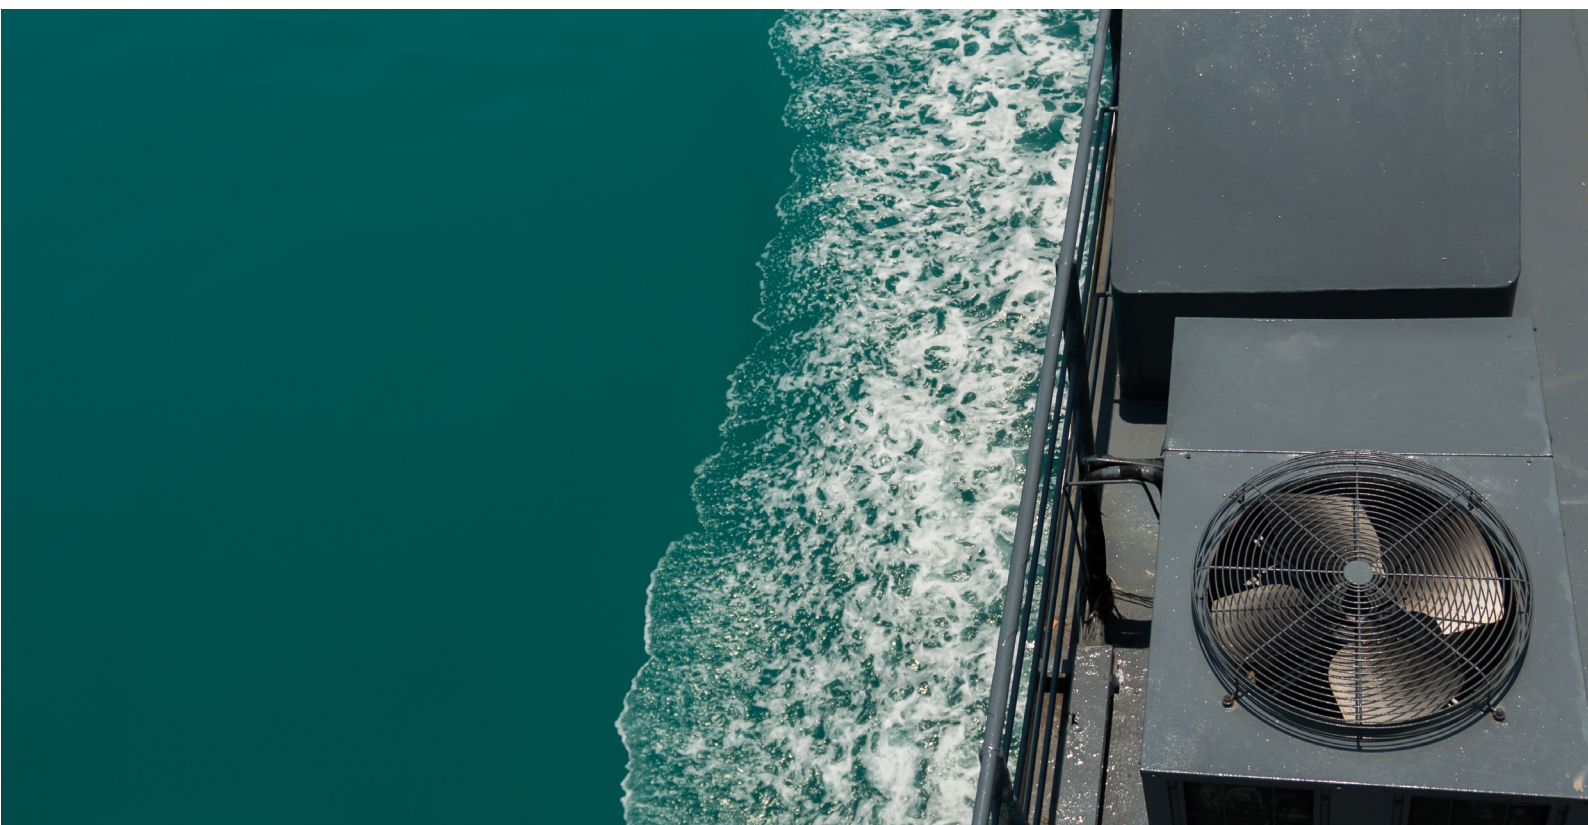

Ball-type defrosting nozzle is designed for targeted air supply onto glazing surfaces in bridges, wheelhouses, and operator stations in marine and offshore applications to ensure improved visibility.

- The adjustable head enables airflow direction within a $\pm 30^\circ$ range, supporting effective demisting and defrosting of glazing.
- The lightweight plastic construction, available in grey or black, ensures aesthetic installation and easy operation.
- The integrated adjustment ring allows quick opening, closing, and smooth airflow regulation without dismantling the component.
- The galvanized steel mounting socket is suitable for DN80 Spiro duct connection.
